

"Your source for fluid conditioning systems"

G-FORCE PACKER TYPE GAS SEPARATOR

The G-FORCE is a revolution in Gas Separation design!

The 1.89 in. I.D. at the outlet section provides a greater volumetric area and a straight path for gas to escape the separator.

The packer forces production fluid into the G-Force separator section where phase separation is maximized, and minimum flow resistance is encountered.

BENEFITS

- Reduces or eliminates gas interference.
- Provides multiple stages of gas separation.
- Increases pumping system efficiency.
- Reduces operating expenses.
- Can be combined with other OSI tools for sand separation and chemical treatment.
